Among adults aged 75 and older, roughly **17.6% of widowers** and **3.6% of widows** ever remarry. The likelihood of remarriage drops dramatically for seniors compared to younger demographics, resulting in a stark gender gap in later-life relationships. Psychology Today +2

Key Breakdown of Remarriage Rates after 75

- **The Gender Gap**: Widowers (men) are nearly five times more likely to marry again than widows (women). Psychology Today
- **Annual Rates**: On an annual basis, the U.S. Census Bureau estimates that for every 1,000 widowed seniors, about **17 men** remarry compared to just **3 women**. Hope For Widows Foundation
- **Remaining Unpartnered**: The vast majority of older adults choose to stay single after losing a spouse. Roughly **94% of widows** and **75.7% of widowers** do not form a new marriage or cohabitation partnership. Psychology Today +1

Why the Percentage is Low for 75-Year-Olds

Factor	Impact on Remarriage
The Marriage Market	Women have a longer life expectancy, creating a highly skewed gender ratio. For Americans 75 and older, 58% of women are widowed compared to only 28% of men.
Social Shifts	Many seniors who form new romantic partnerships choose cohabitation over legal marriage to protect financial assets, pensions, and estate inheritances.
Age Preferences	Men who do remarry in later life frequently marry women who are younger than themselves, leaving a smaller pool of potential partners for 75-year-old widows.
